ACKNOWLEDGEMENTS

The MDI team would like to extend its warmest appreciation to the students, teachers and administrators who made this project possible. Thank you for your participation.

MDI research is made possible with funding from the United Way of the Lower Mainland (UWLM) and school districts across BC. We would like to thank and acknowledge the UWLM and all participating school districts for their support and collaboration on this project.

HELP’s Middle Years research is led by Dr. Kimberly Schonert-Reichl. HELP acknowledges Dr. Schonert-Reichl for her leadership in social and emotional development research, her dedication to exploring children’s experiences in the middle years and for raising the profile of children’s voices, locally and internationally.

HELP faculty and staff would also like to acknowledge our Founding Director, Dr. Clyde Hertzman, whose life’s work is a legacy for the institute’s research. He continues to inspire and guide our work and will always be celebrated as ‘a mentor to all who walked with him.’

For more information please contact HELP’s MDI Project Coordinator:
Email: mdi@help.ubc.ca
Website: earlylearning.ubc.ca/mdi

ABOUT THE HUMAN EARLY LEARNING PARTNERSHIP

The Human Early Learning Partnership (HELP) is an interdisciplinary research institute, based at the School of Population and Public Health at the University of British Columbia. The institute was founded by Dr. Clyde Hertzman in 1999.

HELP’s unique partnership brings together researchers and practitioners from across BC, Canada and internationally to address complex child development issues. HELP’s many research projects explore how different environments and experiences contribute to health and social inequities in children’s development over their life course. To learn more please visit our website at earlylearning.ubc.ca.

WHY THE MIDDLE YEARS MATTER

Experiences in the middle years, ages 6 to 12, have critical and long lasting effects. They are powerful predictors of adolescent adjustment and future success. During this time, children are experiencing significant cognitive, social and emotional changes that establish their lifelong identity and set the stage for adolescence and adulthood. The overall health and well-being of children in their middle years affects their ability to concentrate and learn, develop and maintain friendships, and make thoughtful decisions.

Early adolescent children have an increased awareness of themselves and others. During middle childhood they are developing ideas about how they may or may not “fit in” to their social and academic environments. These ideas have the power to either promote health and academic achievement or lead to negative outcomes such as depression and anxiety in adolescence and adulthood. Although middle childhood is a time of risk, it is also a time of opportunity. There is mounting evidence to suggest that positive relationships with adults and peers during this critical time act to increase a child’s resiliency and success.

ABOUT THE MIDDLE YEARS DEVELOPMENT INSTRUMENT

The Middle Years Development Instrument (MDI) is a self-report questionnaire that asks children in Grade 4 and Grade 7 about their thoughts, feelings and experiences in school and in the community. The MDI is not an assessment for individual children. Instead, it is a unique and comprehensive population-based measure that helps us gain a deeper understanding of children’s health and well-being during middle childhood. Researchers at the Human Early Learning Partnership (HELP) are using results from the MDI to understand the factors that promote children’s social-emotional health and well-being. In addition, the MDI is being used to inform policy and practice and support collaboration across education, health and community sectors.

The MDI uses a strengths-based approach to assess five areas of development that are strongly linked to children’s well-being, health and academic achievement. It focuses on highlighting the protective factors and assets that are known to support and optimize development in middle childhood. These areas are: Social and Emotional Development, Physical Health and Well-Being, Connectedness, Use of After-School Time and School Experiences. Each of these dimensions is made up of several measures and each measure is made up of one or more questions.
Combining select measures from the MDI helps us paint a fuller picture of children’s overall well-being and the assets that contribute to their healthy development. The results for key MDI measures are summarized by two indices:

- **The Well-Being Index** consists of measures relating to children’s physical health and social and emotional development that are of critical importance during the middle years: Optimism, Self-Esteem, Happiness, Absence of Sadness and General Health.

- **The Assets Index** consists of measures of key assets that help to promote children’s positive development and well-being. Assets are resources and influences present in children’s lives such as supportive relationships and enriching activities. The MDI measures four types of assets: Adult Relationships, Peer Relationships, Nutrition and Sleep, and After-School Activities.

The chart below illustrates the relationship between MDI dimensions and measures, and highlights which measures contribute to the Well-Being and Assets Indices.
The MDI companion, “A Guide to Understanding your MDI Results” was developed to support the interpretation and application of MDI results for schools and communities. The guide provides:

- Information on the MDI survey questions, the response scales and the scoring methods for each dimension and measure;
- Answers to important questions related to data collection and privacy, mapping and reporting, as well as the reliability and validity of the MDI;
- Recommendations for moving to action with your MDI results;
- Highlights from current research related to children’s healthy development during the middle years and evidence on the importance of the MDI’s five dimensions of children’s well-being;
- Related research publications and online resources.

Visit our website - Visit our website to learn more about the MDI, to access additional resources and tools, or to contact HELP staff and researchers: www.earlylearning.ubc.ca mdi.

From the research - Highlights from current middle years research are provided throughout the report to help contextualize your MDI results and support understanding of key issues in children’s development. For a full list of citations, please see the MDI References section in “A Guide to Understanding your MDI Results.”
MDI data can support planning and initiate action within schools, organizations and communities. There are many opportunities for working with your MDI results and there are examples of successful initiatives from across the province to learn from. Here, we provide suggestions to help you get started. In addition, HELP staff and researchers are available to provide support to MDI initiatives. If you would like to request support or tell us about your experiences using MDI data please contact our team: mdi@help.ubc.ca.

1. ENGAGE IN CONVERSATIONS
Review your MDI results in collaboration with children, parents and elders, teachers, school administrators, after-school program staff, local early/middle childhood committees, librarians, parks and recreation staff, local government and other community stakeholders. Highlight strengths and examples of success. Increasing local dialogue on the importance of child well-being in the middle years is an excellent way to start improving outcomes for children. Identify school and community champions and create an action plan that involves participation from everyone.

2. INVOLVE CHILDREN
The results from the MDI survey can be shared with children. Involve them as much as possible in the interpretation of the data and gather their feedback on how both the school and the community can better serve their needs. Ask for their suggestions on how to improve their school climate and after-school experiences. Teachers may wish to incorporate an exploration of MDI data into their classroom curriculum. Children tend to offer creative solutions that can often be implemented easily and at no cost.

3. THINK BIG, START SMALL
The MDI provides rich data related to the whole child. It may be overwhelming to consider the many opportunities presented in the data for schools, communities and governments to improve child well-being. Moving to action with MDI data will be more successful if you focus your efforts on 1 or 2 areas for improvement. There are different ways to approach the data. You can focus on individual measures, such as Optimism, Bedtimes, Peer Belonging and Empathy. Alternatively, you can focus on outcomes related to the Well-Being Index, such as ‘Thriving’, or Assets Index, such as the presence of positive Adult Relationships. Questions to consider when identifying an area of focus are: Which measures resonate the most with your stakeholders? Which measures do you have influence over? Which areas align with your mission and mandate?
MOVING TO ACTION

4. LEARN FROM THE SUCCESS OF OTHERS
Review the data from other neighbourhoods and school districts. Do you see examples of success that you would like to replicate? Connect with local champions or leaders from these areas to discuss the actions they have taken to improve child well-being. Likewise, you may want to consider sharing local initiatives and learnings across schools and across districts.

5. CHECK OUT OUR ONLINE RESOURCE
HELP has created ‘Tools for Action,’ an online resource that will help schools and communities interpret and act upon the data included in the MDI reports. You will find videos, worksheets, print resources and examples of how other communities have used their MDI data to move to action. The ‘Tools for Action’ can be accessed on our website: www.earlylearning.ubc.ca mdi/tools.

6. EXPLORE LOCAL MDI RESULTS
Neighbourhoods have unique characteristics that provide important context for interpreting MDI results. Understanding neighbourhood-level differences within a school district or community is important when considering actions to support children’s well-being. Explore local data by using the neighbourhood profiles and maps. Both are useful for illustrating and understanding neighbourhood-level strengths and challenges.
ABOUT THE 2015/2016 RESULTS

HOW THE RESULTS ARE REPORTED

This report provides the MDI data at two levels of geography: by school district and by neighbourhood.

- **School district data** - Averages are reported for all children who participated within the school district.
- **Neighbourhood data** - Averages are reported for all children living within a particular neighbourhood. These data are aggregated using children’s home postal codes, not by where they attend school.

Where school districts or neighbourhoods contain fewer than 35 children, the results are suppressed.

The data in this report have been rounded. Many questions on the MDI allow children to provide multiple responses. Totals for some measures and questions may not equal 100%.

PARTICIPATING SCHOOL DISTRICTS

Eleven school districts participated in the Grade 7 MDI in the 2015/2016 school year, with a total of 5,653 students completing the questionnaire.

This report compares school district results to all of the MDI data collected across the province this year. When making this comparison, it is important to consider the distribution of this year’s participating school districts. Please note that these data do not represent a complete provincial snapshot.

Languages Spoken at Home

Children are able to select more than one language spoken in the home. Therefore, in some cases, the percentages may add up to more than 100%.

Aboriginal Languages

If a child selects “Aboriginal Language” as a language spoken at home they are then asked to identify, if possible, the specific language. These data are not publicly available.

Other

A limited selection of languages are offered on the MDI questionnaire. The “other” category gives children an opportunity to enter their own response(s). For a list of common responses given for “other” languages, please email: mdi@help.ubc.ca.
SOCIAL & EMOTIONAL DEVELOPMENT

IT’S IMPORTANT BECAUSE...

Social and emotional competencies are critical for children’s successful development throughout their lives. Social and emotional well-being is associated with greater motivation and achievement in school, as well as positive outcomes later in life including post-secondary education, employment, healthy lifestyles, and physical and psychological well-being.

Detailed information on the MDI survey questions and response scales for Social and Emotional Development are available in the MDI Guide.

RESULTS FOR YOUR DISTRICT

Total number of children in SD 50: 57

Percentage of children who reported:

High well-being

Medium well-being

Low well-being

Average for all districts, 2015/16*
(Number of children: 5,653)

*See page 9 for a list of participating school districts. Please note that these data do not represent a complete provincial snapshot.

The MDI questionnaire asks children 23 questions related to their Social and Emotional Development. For a complete list of questions and an explanation of how these measures are scored, see ‘A Guide to Understanding your MDI Results.’

OPTIMISM
Optimism refers to the mindset of having positive expectations for the future. e.g. “I have more good times than bad times.”

EMPATHY
Empathy is the experience of understanding and sharing the feelings of others. e.g. “I care about the feelings of others.”

PROSOCIAL BEHAVIOUR
Prosocial behaviour refers to actions that benefit others. e.g. “I helped someone who was hurt.”

SELF-ESTEEM
Self-esteem refers to a person’s sense of self-worth. e.g. “A lot of things about me are good.”

HAPPINESS
Happiness refers to how content or satisfied children are with their lives. e.g. “I am happy with my life.”

ABSENCE OF SADNESS
Absence of Sadness measures the beginning symptoms of depression. e.g. “I feel unhappy a lot of the time.”

ABSENCE OF WORRIES
Absence of Worries measure the beginning symptoms of anxiety. e.g. “I worry a lot that other people might not like me.”

HAIDA GWAI (SD 50) 2015/2016 GRADE 7 MDI - 11

### SELF-REGULATION (LONG-TERM)

Long-term self-regulation requires adapting present behaviour to achieve a goal in the future. e.g. “If something isn’t going according to my plans, I change my actions to try and reach my goal.”

### SELF-REGULATION (SHORT-TERM)

Short-term self-regulation is about impulse control. It requires adapting behaviour or emotions to meet an immediate goal. e.g. “I can calm myself down when I’m excited or upset.”

### RESPONSIBLE DECISION-MAKING

Responsible decision-making is about understanding the consequences of one’s actions and making good choices about personal behaviour. e.g. “When I make a decision, I think about what might happen afterward.”

### SELF-AWARENESS

Self-awareness is the ability to recognize one’s emotions and thoughts while understanding their influence on behaviour. e.g. “When I’m upset, I notice how I am feeling before I do something.”

### PERSEVERANCE

Perseverance refers to determination. It means putting in persistent effort to achieve goals, even in the face of setbacks. e.g. “Once I make a plan to get something done, I stick to it.”

### ASSERTIVENESS

Assertiveness means communicating a personal point of view. It includes the ability to stand up for oneself. e.g. “If I disagree with a friend, I tell them.”

### SOCIAL & EMOTIONAL DEVELOPMENT

Children are asked to rate the following statements:

<table>
<thead>
<tr>

- **28%** Yes
- **72%** No

Do you plan on volunteering in the future?

- **88%** Yes
- **12%** No

---

**CITIZENSHIP AND SOCIAL RESPONSIBILITY**

A Vancouver-based study asked Grade 10 children to volunteer 1-1.5 hours per week with elementary school children. After 10 weeks researchers found participants had significantly decreased their risk for cardiovascular disease. The greatest health benefits were seen in children who displayed the highest self-report measures of empathy and mental health.

(Schreier, Schonert-Reichl, & Chen, 2013)
Promoting children’s physical and mental health is important for maintaining their overall health outcomes. It is important to provide children with direction, information and opportunities to develop a healthy lifestyle and to make appropriate lifestyle choices. In addition to physical activity, a good night’s sleep, combined with sharing meals with family members and starting the day with a healthy breakfast, are important factors for positive physical health outcomes.

Detailed information on the MDI survey questions and response scales for Physical Health and Well-Being are available in the MDI Guide.

When families eat together regularly there are positive and preventative effects on children’s healthy behaviours, self-esteem and academic achievement. These mealtime routines provide opportunities for building family cohesion and stability, as well as teaching children about healthy food behaviours.

*See page 9 for a list of participating school districts. Please note that these data do not represent a complete provincial snapshot.

(For example, see Larson et al., 2013)

WHAT TIME DO YOU USUALLY GO TO BED DURING THE WEEKDAYS?

- Before 9pm: 9%
- 9pm - 10pm: 45%
- 10pm - 11pm: 27%
- 11pm - 12pm: 5%
- After 12am: 14%

Children's lack of sleep is linked with increases in anxiety, while anxiety is also associated with disturbing children's sleep patterns. During middle childhood the brain is particularly sensitive to sleep quality because the brain's memory and learning processes are developing during these periods.

(McMakin & Alfano, 2015)

14 - SCHOOL DISTRICT RESULTS
CONNECTEDNESS

IT’S IMPORTANT BECAUSE...

Children’s connections to their parents, peers and the people in their schools and communities play a central role in their development. These connections promote mental health and can act as protective factors to children’s well-being. Research shows that a single caring adult, be it a family member, a teacher or a neighbour, can make a very powerful difference in a child’s life.

Detailed information on the MDI survey questions and response scales for Connectedness are available in the MDI Guide.

RESULTS FOR YOUR DISTRICT

CONNECTEDNESS WITH ADULTS

Total number of children in SD 50: 57

Percentage of children who reported:

- High well-being
- Medium well-being
- Low well-being

Average for all districts, 2015/16* (Number of children: 5,653)

ADULTS AT SCHOOL

Assesses the quality of relationships children have with the adults they interact with at school. E.g. “At my school there is an adult who believes I will be a success.”

ADULTS IN THE NEIGHBOURHOOD/COMMUNITY

Assesses the quality of relationships children have with the adults they interact with in their neighbourhood or community. E.g. “In my neighbourhood/community there is an adult who really cares about me.”

ADULTS AT HOME

Assesses the quality of relationships children have with the adults in their home. E.g. “In my home there is a parent or other adult who listens to me when I have something to say.”

*See page 9 for a list of participating school districts. Please note that these data do not represent a complete provincial snapshot.

NUMERICAL INFORMATION

Social relationships during middle childhood strongly influence well-being. Among Grade 4 students, peer belonging and positive relationships with adults in the home were associated with better outcomes on self-reported well-being. In addition, feeling connected to adults in school was linked to both increased health and life satisfaction.

(Gadermann, Guhn, Schonert-Reichl et al, 2015)

HAIDA GWAI (SD 50) 2015/2016 GRADE 7 MDI - 15

</thead>
</table>

A 32-year study of children’s pathways to positive well-being in adulthood found that strong social connections in adolescence are a better predictor of well-being in adulthood than their academic achievement.

(Olsson, 2013)
USE OF AFTER-SCHOOL TIME

IT’S IMPORTANT BECAUSE...

Participation in activities after school provides important developmental experiences for children in their middle years. These activities create a variety of opportunities for children to build relationship skills and gain competencies. Research has consistently found that children who are engaged in after-school activities experience greater academic and social success.

Detailed information on the MDI survey questions and response scales for Use of After-School Time are available in the MDI Guide.

RESULTS FOR YOUR DISTRICT

During last week after school (from 3pm-6pm), how many days did you participate in:

ANY ORGANIZED ACTIVITY
Children who participated in any after-school activity that was structured and supervised by an adult. For example, educational lessons, youth organizations, music or art lessons and sports practice.

EDUCATIONAL LESSONS OR ACTIVITIES
For example, tutoring, attending a math school, foreign language lessons, or some other academic related activity.

MUSIC OR ART LESSONS
For example, drawing or painting classes, musical instrument lessons or some other activity related to music or art.

YOUTH ORGANIZATIONS
For example, Scouts, Girl Guides, Boys and Girls Clubs, or some other group organization.

INDIVIDUAL SPORTS (WITH A COACH OR INSTRUCTOR)
For example, swimming, dance, gymnastics, ice skating, tennis or another individual sport.

TEAM SPORTS (WITH A COACH OR INSTRUCTOR)
For example, basketball, hockey, soccer, football or another team sport.

AFTER-SCHOOL ACTIVITIES

Total number of children in SD 50: 57

Percentage of children who reported:

2+ times per week

Once per week

Not at all

Average for all districts, 2015/16*
(Number of children: 5,653)

*See page 9 for a list of participating school districts. Please note that these data do not represent a complete provincial snapshot.

The hours from 3-6pm are known as the ‘critical hours’ because this is the time of day when children are most likely to be left unsupervised. Learn more about ‘critical hours’ and the importance of structured vs. unstructured play time in the MDI Guide.
USE OF AFTER-SCHOOL TIME

HOW CHILDREN SPEND THEIR TIME

Children were asked how they spend their time during the after-school hours of 3pm-6pm on unstructured or unsupervised activities:

Total number of children in SD 50: 57

Percentage of children who reported:

- 2+ hours
- 1 - 2 hours
- 30 min. - 1 hour
- <30 minutes
- Not at all

Average for all districts, 2015/16* (Number of children: 5,653)

*See page 9 for a list of participating school districts. Please note that these data do not represent a complete provincial snapshot.
USE OF AFTER-SCHOOL TIME

WHAT CHILDREN WISH TO BE DOING

Children were asked what they want to be doing during the after school hours of 3pm-6pm:

- I am already doing the activities I want to be doing.  
  80%

- I wish I could do additional activities.  
  32%

- I am doing some of the activities I want, but I wish I could do more.  
  13%

Children who answered that they wish to be doing additional activities were asked to identify one activity they wish they could do and where they would like to do it. Note: responses are grouped into categories for reporting purposes.

A study examining the experiences of children in Grades 1-5 who participated in after-school programs found that children who participated in high-quality, structured after-school programs had increased social-emotional skills, in addition to fewer conduct problems and higher social self-control and assertion.

(Wade, 2015)

**WHO ARE YOU WITH AFTER SCHOOL?**

(Children can select all of the options that apply)

- By myself: 43%
- Friends about my age: 61%
- Younger brothers/sisters: 38%
- Older brothers/sisters: 30%
- Mother (or stepmother/foster mother): 63%
- Father (or stepfather/foster father): 45%
- Other adult (such as grandparent, aunt or uncle, coach, babysitter): 21%
- Other: 5%

**In your neighbourhood/community there are safe places where you feel comfortable to hang out with friends:**

- Yes: 91%
- No: 7%
- Don’t Know: 2%

**In your neighbourhood/community there are places that provide programs for kids your age:**

- Yes: 82%
- No: 9%
- Don’t Know: 9%
SCHOOL EXPERIENCES

IT’S IMPORTANT BECAUSE...

The transition from elementary school to middle and high school is a critical time developmentally. Children’s experiences of bullying, as well as teacher and peer relationships change significantly during these transitions. Children’s sense of safety and belonging at school can foster greater school success. When children feel their needs are being met at school they are more likely to feel attached to their school, have better attendance and higher academic performance.

Detailed information on the MDI survey questions and response scales for School Experiences are available in the MDI Guide.

RESULTS FOR YOUR DISTRICT

Total number of children in SD 50: **57**

Percentage of children who reported:

- **High well-being**
- **Medium well-being**
- **Low well-being**

Average for all districts, 2015/16* (Number of children: **5,653**)

*See page 9 for a list of participating school districts. Please note that these data do not represent a complete provincial snapshot.

ACADEMIC SELF-CONCEPT

Children's beliefs about their academic ability, including their perceptions of themselves as students and how interested and confident they feel in school. e.g. “I am certain I can learn the skills taught in school this year.”

- **82%**
- **16%**
- **2%**

SCHOOL CLIMATE

The overall tone of the school environment, including the way teachers and students interact and how students treat each other. e.g. “People care about each other in this school.”

- **79%**
- **16%**
- **5%**

SCHOOL BELONGING

School belonging is the degree to which children feel connected and valued at their school. e.g. “I feel like I am important to this school.”

- **72%**
- **16%**
- **12%**

Children’s perception of kindness within a school is a consistent indicator of a positive school climate. Students who see kind behaviours in students, teachers and staff also describe their school environments as being safe and encouraging places to learn. As children transition from Grade 4 to Grade 8, perceptions of kindness in schools decrease.

(Binfet, Gadermann & Schonert-Reichl, 2016)
Children and youth who demonstrate empathy are less likely to bully others and are more likely to defend against bullying. Research shows that specific empathy skills differ between those who bully, are victimized, defend or are bystanders. Focusing on developing children’s understanding of what others feel results both in less bullying and more defending behaviours. (van Noorden et al, 2015)
Combining select measures of the MDI helps us paint a fuller picture of children's overall well-being and the assets that contribute to their healthy development. In this section of the report, results for key MDI measures are summarized into two indices that deepen our understanding of how the five dimensions work together to support children: The Well-Being Index and the Assets Index.

MDI research has shown there is a relationship between children's assets and well-being. Children's self-reported well-being is directly related to the number of assets they perceive in their lives; as the number of assets in a child's life increases, they are more likely to report higher levels of well-being. This finding is consistent across all participating school districts in British Columbia.

**THE WELL-BEING INDEX**

The Well-Being Index combines MDI measures relating to children's physical health and social and emotional development that are of critical importance during the middle years. These are: Optimism, Happiness, Self-Esteem, Absence of Sadness and General Health.

Scores from these five measures are combined and reported by three categories of well-being, providing a holistic summary of children's mental and physical health:

- **Thriving**: Children who are reporting positive responses on at least 4 of the 5 measures of well-being.
- **Medium to High Well-Being**: Children who are reporting no negative responses, but fewer than 4 positive responses.
- **Low Well-Being**: Children who are reporting negative responses on at least 1 measure of well-being.

**RESULTS FOR YOUR DISTRICT**

**Haida Gwaii (SD50)**

- 21% Low
- 23% Medium to High
- 56% Thriving

**All Participating Districts**

- 31% Low
- 26% Medium to High
- 43% Thriving
The Assets Index combines measures that highlight four key assets that help to promote children’s positive development and well-being. Assets are positive experiences, relationships or behaviours present in children’s lives.

**Adult Relationships**
- Adults at School
- Adults in the Neighbourhood
- Adults at Home

**Peer Relationships**
- Peer Belonging
- Friendship Intimacy

**Nutrition & Sleep**
- Eating Breakfast
- Meals with Adults at Home
- Frequency of Good Sleep

**After-School Activities**
- Organized Activities

---

**Percentage of children reporting the presence of the following assets in their lives:**

Total number of children in SD 50: **57**

- **Adult Relationships**: 91%
- **Peer Relationships**: 84%
- **Nutrition & Sleep**: 68%
- **After-School Activities**: 82%

Average for all districts, 2015/16* (Number of children: **5,653**)

*See page 9 for a list of participating school districts. Please note that these data do not represent a complete provincial snapshot.*
Neighbourhoods have unique characteristics that provide important context for interpreting MDI results. Understanding neighbourhood-level differences within a school district or community is essential when considering actions to support children’s well-being. The neighbourhood results section includes:

**Neighbourhood Maps**
- Your Community Map: representing school district and neighbourhood boundaries
- Well-Being Index Map: representing the percentage of children who are “Thriving.”
- Assets Index Maps: representing the percentage of children reporting the presence of each of the four assets of the Assets Index: Adult Relationships, Peer Relationships, Nutrition and Sleep, and After-School Activities.

**Neighbourhood Data Table** - a summary table of the Well-Being Index and Assets Index data.

**Neighbourhood Profiles** - a summary of MDI data based on the neighbourhoods in which children live. Results are provided for the Well-Being Index, the Assets Index and a selection of questions related to after-school time and community belonging and safety.

Note that these data are aggregated based on children’s home postal codes, not by where they go to school. Where neighbourhoods contain fewer than 35 children, the results are suppressed.
NEIGHBOURHOOD PROFILE: HAIDA GWAII

Number of children: 57
