Project Growth: Early Development Instrument (EDI)

Purpose: To evaluate the needs of children in the United States and the impact of early childhood education on their development. The Early Years Development Instrument (EDI) is a tool used by schools to monitor the progress of children in various areas, including language, social-emotional, and cognitive development.

The EDI is designed to help teachers identify areas where children may need additional support and to document their progress over time. It is intended to be used as a guide for parents and educators to support children's early learning and development.

Stakeholders involved:
- Teachers
- Parents
- School administrators
- Researchers

The EDI is a collaborative effort between the University of British Columbia (UBC) and other organizations, including the Human Early Learning Partnership (HELP). The EDI is available online at https://earlylearning.ubc.ca/monitoring-system/edi/parent-caregiver-info/
